Custom Client Certificate Addendum to the Comodo Certification Practice Statement v.3.0

The purpose of this Addendum to the Comodo Certification Practice Statement ("ACPS") is to amend version 3.0 of the Comodo Certification Practice Statement ("CPS") to include additional uses for custom client certificates. All provisions of the CPS not specifically amended or added herein remain in full force and effect and where applicable shall apply to the new product offerings. Only the amended portions in this ACPS are included herein. Nothing in the CPS shall be deemed omitted, deleted or amended unless expressly stated in this ACPS. Headings from the CPS are included to identify the location of the Amended information and are not intended to be duplicative.

2.4.2 Comodo SSL Client / Secure Email Certificates

. .

d) Custom Client Certificates

[Custom Client Certificates are versatile client certificates that may be used for authentication, encryption, digital signing of documents, and other purposes. The fields in these certificates are customizable to allow their use in a wide range of applications requiring client authentication.

The flexibility of the subject fields of these certificates lends them particularly to backward compatibility with legacy applications requiring a fixed format as well as to new applications with unusual requirements.

These certificates are issued to both individuals and corporations. Depending on the purpose of the certificate, Custom Client Certificates may be persona non-validated, validated by domain name, or validated as to the organizational entity receiving the certificate.

Custom Client Certificates issued through a Comodo partner may have validation requirements set by the Comodo partner. Anyone wanting to use or rely on a Custom Client Certificate from a Comodo partner should contact the Comodo partner first to obtain all of the important validation information about the certificate's issuance.]

. .

4.2.11 Custom Client Certificates

[Comodo Custom Client Certificates may receive one of the following levels of verification:
- Persona non validated: No identity validation is performed. The subscriber may be required to show their access to an email address identified in the certificate. Persona non validated is further described in 4.2.6.
- Domain validation: The subscriber's must demonstrate their access to a domain name specified in the certificate. Domain validation is further described in Section 4.2.2
- Identity validation: Information about an entity's identity is verified as described in Section 4.2.4. For individuals this might include requiring the individual to appear before the CA, an agent of the CA, or a notary or similar official. The official must check the identity of the subscriber against recognized government identification.

Custom Client Certificates issued from partners are validated in accordance with the validation procedures set by the partner. Interested parties are directed to the partner for full information on the validation of their custom client certificates.]

. .

Document Control
This document is the Custom Client Certificate Addendum to the Comodo CPS Version 3.0, created on March 24, 2009 and signed off by the Comodo Certificate Policy Authority.
